Abstract (en)
[origin: WO2017186474A1] The invention relates to a women's garment (1) comprising a constructed bust part (2) having two cups (3), and two shoulder straps (4) attached to the cups (3). The cups (3) are formed from at least two foam layers (11) joined together via thermoforming. The two cups (3) have a thickening (10) at the lower edge (7) thereof, which is formed during the thermoforming of the foam layers (11) and runs along the breast. A stabilisation element (12) is arranged between the foam layers (11), having a section (13) starting from the shoulder straps (4) at an outer edge (8) of the cups (3) and extending down to the lower edge (7) of the cups (3), and a section (14) starting from the shoulder straps (4) and extending along a part of an upper edge (9) of the cups (3). A part of the upper edge (9) of the cups (3) and a central region of the cups (3) are free from the stabilisation element (12).
