Abstract (en)
[origin: WO2017186729A1] The invention relates to an ejection device (6) for a moveable furniture part (3), comprising a drive element (35) which is tensioned by at least one spring (12) and which moves the movable furniture part (3) from a closed position into and open position, the at least one spring (12) can be moved into a tensioned position along a path during a closing and opening movement of the furniture part (3), and the furniture part (3) can be blocked at the closed position with at least one tensioned spring (12). A return stop limits an opening or closing movement of the moveable furniture part (3) when the spring (12) is tensioned during a closing or opening movement of the furniture part (3) is not yet completed, is provided. The return stop comprises a blocking lever (17) which can be moved along a path (33) and which, during a closing or opening movement of the movable furniture part, can be engaged with a rack (16) when the tensioning process is interrupted. As a result, the return stop maintains the moveable furniture part securely counter to ejection.
