Abstract (en)

[origin: WO2017186333A1] The invention relates to a sample container that is designed to accommodate a cryogenically preserved biological sample, and to a method for producing the sample container. The invention further relates to a method for monitoring the temperature of a cryogenically preserved biological sample. The sample container that is designed to accommodate a cryogenically preserved biological sample has, on a region of its outer surface, a frozen-solid indicator substance whose melting point is in a range from -20°C to -140°C.
