Abstract (en)

[origin: WO2017186342A1] The invention relates to a motor vehicle door handle assembly comprising a handle (1, 23) which can be moved from a rest position into an actuation position. A handle hook (2, 22, 32) which is arranged on the rear face of the handle (1, 23) is kinematically coupled to a deflecting lever (5, 25, 35) in the assembled state, and the deflecting lever (5, 25, 35) acts directly or indirectly on a motor vehicle door lock when the handle is displaced from the rest position into the actuation position. The motor vehicle door handle assembly has at least one guide path (11, 21, 31) as an assembly aid on which the handle hook (2, 22, 32) is guided into a position in which the handle hook (2, 22, 32) is kinematically coupled to the deflecting lever (5, 25, 35) upon being inserted into the motor vehicle door handle assembly
