Abstract (en)

[origin: CN109288459A] The invention relates to a cleaning device (1), in particular to a cleaning device for a wet cleaning equipment, wherein the cleaning device is provided with a housing (2), a vibration plate (3) driven by the motor and a bearing plate (4) detachably connected to the vibration plate (3) for accommodating cleaning elements (5). In order to achieve the cleaning device (1) that the bearing plate (4) is dismounted from the vibration plate (3) without manually grasping the bearing plate (4) or the vibration plate (3) by a user. The cleaning device (1) is provided with an operating device (6) which is movably supported on the housing (2) for isolating the bearing plate (4) from the vibration plate (3). The operating device (6) can move towards the bearing plate (4) due to operation, so that the bearing plate can be detached from the vibration plate (3).
