Abstract (en)  
Kit (1) adapted to be assembled on a floor (3) for covering the floor, the kit comprising at least one part (15) adapted for forming a floor covering (17) having a thickness F1 in a direction (V) intended to be perpendicular to the floor when the kit is assembled. The kit comprises a plurality of substrate elements (13) adapted for being located under the floor covering at least when the kit is assembled. The thickness F1 is larger than or equal to 1 mm, each of the substrate elements has a same thickness E1, and the substrate elements comprise a material having a Young's modulus higher than 300 MPa.
