Abstract (en)
A framing system, automated luminaire, and method are provided. The framing system includes a first prism system and a second prism system. The first prism system includes a first barrel prism and positions the first barrel prism in a light beam or to remove the first barrel prism from the light beam. The first prism system may rotate the first barrel prism. The second prism system includes a second barrel prism and is configured to position the second barrel prism in the light beam that passes through the first prism system or to remove the second barrel prism from the light beam. The second prism system may rotate the second barrel prism.
