Abstract (en)
[origin: CN109426126A] The invention discloses a watch movement including a frame (10) comprising a first bearing (20) and a second bearing (30), and a tourbillon (40) comprising two cages, of which one cage is known as the external cage (41), the external cage being mounted in a pivoting manner on the frame between the first bearing (20) and the second bearing (30), the movement comprising in addition two watch jewels (52, 53) supporting two pivots (44, 45) of the external cage, wherein the movement includes two translational elements (80, 90) capable of displacement in relation to the bearings (20, 30) in the axis (A1) of rotation of the external cage (41) in the assembled position of the external cage (41) on the frame, so as to cause a displacement of the watch jewels (52, 53) or a displacement of the pivots (44, 45).
