Abstract (en)  
[origin: EP3451220A1] An erasing device 1 includes a large-capacity storage device interface to which a large-capacity storage device 3 is detachably connected and an information processing device interface 12 to which an information processing device 21 is detachably connected. An MPC 14 erases information stored in the large-capacity storage device 3 after the large-capacity storage device 3 and the information processing device 21 are connected. Thereafter, the MPC 14 brings the information processing device 21 from a state in which the information processing device 21 cannot access the large-capacity storage device 3 into a state in which the information processing device 21 can access the large-capacity storage device 3.
