Abstract (en)

[origin: EP3451580A2] A communication device receiving a first radio resource control (RRC) Reconfiguration message from a base station (BS) on a signaling radio bearer (SRB), wherein the first RRC Reconfiguration message configures a first data radio bearer (DRB) and configures a local cache routing configuration; receiving a second RRC Reconfiguration message from the BS on the SRB, wherein the second RRC Reconfiguration message configures a second DRB; transmitting a first protocol data unit (PDU) to the BS on the first DRB, wherein the communication device indicates a local cache routing in a PDU header of the first PDU when the local cache routing configuration is configured by the BS; transmitting a second PDU to the BS on the second DRB, wherein the communication device does not indicate the local cache routing in the second PDU.
