Abstract (en)
[origin: EP3451809A1] A bracket device (26, 200, 300) includes a bracket (32, 206, 306) and a fastening member (34, 210, 310). The fastening member (34, 210, 310) is pivoted to the bracket (32, 206, 306) by a shaft member (50). The bracket (32, 206, 306) includes a first structure (42, 202, 302) and the fastening member (34, 210, 310) includes a second structure (44, 204, 304). When the fastening member (34, 210, 310) is located at a position, the first structure (42, 202, 302) is in cooperation with the second structure (44, 204, 304), so as to prevent the fastening member (34, 210, 310) from moving along an axis direction (X) of the shaft member (50).
