Abstract (en)

[origin: WO2017192765A1] A food preparation device can include a receptacle, a manipulator, one or more sensors and a processor. The processor can recognize one or more food items being prepared on the receptacle to detect attributes of each food item of the one or more food items, based on the sensor data of the one or more sensors. Additionally, the processor can control a cooking operation of the manipulator based on the detected attributes.
