Abstract (en)
[origin: WO2017191004A1] The invention relates to a collapsible mobility aid with two frame elements (2), on each of which at least one wheel is secured or can be secured, and with a folding mechanism (6) by which the frame elements (2) are connected to each other, and a distance between the frame elements (2) in a first position of the folding mechanism (6) can be adapted to a transport distance and in a second position of the folding mechanism (6) can be adapted to a use distance, wherein the folding mechanism (6) has a central element (8) with a slide (10) arranged movably with respect thereto, at least two connection arms (12) which are each articulated on a frame element (2) and on the central element (8), and at least two levers (18) which are each articulated on a connection arm (12) and on the slide (10), wherein the pivot axes (20, 22) about which the levers (18) are arranged pivotably on the connection arms (12) and on the slide (10) are situated in one plane when the folding mechanism (6) is located in the second position.
