Abstract (en)

[origin: WO2017190739A1] The invention relates to a circular weaving machine for weaving a weaving core (1), comprising at least one shuttle (5) which has a weft spool (7) and can be moved along a circular continuous track around the weaving core (1), and warp coil devices (10), each of which having a warp yarn bobbin (11). It is proposed that the warp coil devices (10) are designed in a movable manner, wherein the travel path of the warp coil device (10) with the warp yarn bobbin (11) extends through a weaving plane (6) which is enclosed by the circular continuous track (2, 23).
