Abstract (en)
[origin: WO2017190970A1] The invention relates to an intermediate layer (10) for arranging between a rail cross-tie and a track, which intermediate layer has a longitudinal web (20) on the top side (11) thereof and/or on the bottom side (12) thereof, which longitudinal web extends in a longitudinal direction (L), wherein the longitudinal web (20) ends in or at at least one transverse web (40), the length of which transversely to the longitudinal direction (L) is greater than a width of the longitudinal web (20) in this direction, wherein the at least one longitudinal web (20) is formed by longitudinal recesses (62), and wherein the at least one transverse web (40) is formed by one or more transverse recesses (60).
