Abstract (en)

[origin: WO2017191330A1] The invention relates to a deflection rocker for actuating a rotary latch (1) of a vehicle sliding door (2), said deflection rocker comprising an actuating lever (3) for moving the rotary latch (1), wherein said actuating lever (3) can be moved between a locking position for locking the rotary latch (1) and an unlocking position for unlocking the rotary latch (1), and an emergency unlocking lever (6a), which emergency unlocking lever (6a) can be brought into engagement with the actuating lever (3) for moving the actuating lever (3) into the unlocking position. The deflection rocker according to the invention is characterized in that said deflection rocker comprises a hinge device (4) which is fixedly connected to the actuating lever and by which the actuating lever (3) can be coupled to the rotary latch (1), so that the rotary latch (1) and the actuating lever (3) follow their movement in an alternating manner. The invention also relates to a corresponding locking arrangement of a vehicle sliding door.
