Abstract (en)

[origin: WO2018019715A1] The invention relates to an apparatus for influencing the movability of a door which can be moved between a closed position and an open position, in particular of a motor vehicle, which apparatus comprises a sensor system for determining the door position and/or the door moving speed, an actuating device for setting a resistance to movement of the door, and a control device for controlling the actuating device as a function of the determined door position and/or the door moving speed.
