Abstract (en)  
[origin: CA3022678A1] The invention relates to a coupling device consisting of two connector block parts (2, 4), which can be coupled to each other and which have a plurality of receptacles for connector parts (10), which connector parts are arranged in correspondence with each other and can be connected to each other, is characterized in that a supporting device is provided for supporting the coupling process, which supporting device has, on the one connector block part (2), a pivotable handle (16) having at least one guide slot (30), in which at least one guide part (32) of the other connector block part (4) engages in such a way that, when the handle (16) is pivoted, the guide slot (30) applies a force to the guide part (2, 4) in question in such a way that the connector block parts (2, 4) are moved toward each other for a coupling process.
