Abstract (en)
[origin: WO2017193105A1] A natural language application program providing a graphics user interface on the touch-sensitive display including sequential data entry means in the form of a keyboard, permitting entry of alpha-numeric strings which may take the form of a uniform resource locator, one function of which is to navigate the World Wide Web and to select, title and bookmark websites with user-created titles, and to display a field of the titles or equivalent thumbnail images of the home page of each bookmarked website on a plurality of pages where each string can be recalled with a touchscreen gesture.
