Abstract (en)

A decant device includes a tubular body (1) being hollowed and having an upper end (12) and a lower end (13) being open. The lower end (13) is capable of combining with a mouth of a cup (3). A dispenser (2) is assembled in the tubular body (1). The dispenser (2) has a plate body (21) laterally connected to an inner wall of the tubular body (1). The plate body (21) has a center portion (22) and the plate body (21) has a curved surface protruding from the center portion (22) toward the lower end (13). The plate body (21) has a plurality of through holes (23A) surrounding the center portion (22), and an extension direction of each of the through holes (23A) is perpendicular to a corresponding portion of the curved surface where the through hole (23A) is located.
