Abstract (en)
[origin: CN109466843A] A labeling machine for containers is provided. The labeling machine comprises a container carousel and at least two labeling units arranged in its periphery, each comprising: a first roll carrier for unwinding a loaded carrier tape; a dispensing arm having a dispensing edge for detaching the labels from the carrier tape; a second roll carrier for winding the deflated carrier tape; and a tripod for positional adjustment with respect to a base. Due to the fact that the stands are arranged on different sides by a dividing plane defined respectively between the first roll carrier and the dispensing arm, a multiplicity of machine variants with improved access to the roll carriers is possible with a low outlay on equipment.
