Abstract (en)

[origin: WO2017194859A1] Rolling device (1) comprising a chassis (2) equipped with a reservoir (3) for holding bulk materials and with a smoothing table (4), the smoothing table (4) having a leading edge (5) arranged transversely to the direction of movement of the device, and the bottom (6) of the reservoir (3) being provided with a discharge opening (7) arranged between the leading edge (5) of the smoothing table (4) and the wheels (8) of the rolling chassis (2) of the device (1), the rolling chassis (2), of which the wheels (8) are driven, is mounted so as to be able to tip about the axis (XX') of rotation of its wheels (3) and the reservoir (3) and the smoothing table (4) form a movable assembly (3, 4) of which the position can be adjusted by adjustment means (91, 92) so as to be able to adjust the height of the smoothing table (4) and the discharge opening (7), and the inclination of the smoothing table (4).
