Abstract (en)
[origin: WO2017193148A1] The invention relates to an actuating drive (1) for driving a movably mounted furniture part (2) of a piece of furniture (3), comprising at least one actuating arm (4) to be connected to the furniture part (2) and comprising a force accumulator (5) for applying force to the at least one actuating arm (4), wherein the force accumulator (5) has at least one spring (6) and at least two base parts (7, 8), which can be moved relative to each other and between which the at least one spring (6) is arranged, and a guiding device (9) is arranged within the at least one spring (6), wherein the guiding device (9) is designed in such a way that the guiding device supports the at least one spring (6) against buckling of the spring (6) over the entire length (L1) of the spring (6) and in every position of the spring (6) resulting from motion of the at least two base parts (7, 8) relative to each other.
