Abstract (en)
The present disclosure relates to a toy. In some embodiments, the toy includes first cubic blocks (10), second cubic blocks (20), connectors (30), and pivoting shafts (40). For example, the first cubic block (10) includes a first recessed space recessed from a first edge to a first center of the first cubic block (10), and a second recessed space recessed from a second edge to the first center. The second edge is perpendicular to and does not intercept the first edge. The second cubic block includes a third recessed space recessed from a third edge, and a fourth recessed space recessed from a fourth edge. Each of the connectors (30) connects one of the first cubic blocks (10) and one of the second cubic blocks. Each of the pivoting shafts (40) connects a respective connector (30) to one of the first and second cubic blocks that is configured to rotate around the respective pivoting shaft (40).
