Abstract (en)
[origin: WO2016087169A1] The present invention relates to a packaging machine (1), which unrolls a lower film web (8) from a supply roller (52) and transports it intermittently or continuously along the packaging machine and thereby forms packaging recesses (6) in the lower film web (8) in a forming station (2), after which the packaging recesses are filled with a product (16) to be packaged, wherein an upper film web (14) is subsequently sealed onto the lower film web (8) in a sealing station (15), wherein the upper film web (14) is unrolled from a supply roller (22). Provided downstream of the supply roller is a dancer (20), which has at least one, preferably two rollers (23.1, 23.2), which are provided on a linkage (23.4), which, driven by a rotary drive, rotates about an axis of rotation (23.3) and thereby stores a certain length of film web (8, 14) and/or produces a certain tension in the film web (8, 14).

Abstract (de)
Die vorliegende Erfindung betrifft eine Verpackungsmaschine mit einem Tänzer, einer Folienbremse, einem Klebetisch und/oder einer Folienrolle.
