Abstract (en)

[origin: EP3456679A1] The present invention belongs to the field of manufacturing and transport, more precisely the invention relates to a telescopic arm for a crane together with a hydraulic cylinder (4), piping and attachments in the arm of the forestry crane. The telescopic arm (1-3) for a forestry crane with a system of internal leading of flexible hydraulic tubes (8a, 8b, 8c, 8d) of outer users is designed in such a way that in the longitudinal axis of the telescopic arm a hydraulic cylinder (4) is provided that has a housing (1a) with larger wheels for flexible tubes. A chain (6a, 7a) is installed above the cylinder via a sprocket having a separate axis from the leading wheels (5a, 5b).
