Abstract (en)

[origin: EP3456889A1] The invention discloses a rotating mechanism and a faucet with the same. The faucet includes a faucet body and a faucet base, wherein the faucet base includes a faucet switch and the rotating mechanism, the rotating mechanism includes a mounting base fixedly connected onto a working table and a rotating member rotationally connected with the mounting base, the faucet body is fixedly connected with the rotating member, and the mounting base is provided with a limiting device for affixing a position of the rotating member. The faucet fixed on the rotating member can rotate along with rotation of the rotating member around the mounting base, the limiting device is arranged on the mounting base, so that the rotating member rotating to a certain position can be fixed, thus solving the problem that the faucet cannot be fixed due to loosening.
