Abstract (en)
[origin: JP2019045489A] To provide a watch case having a horn which can easily be disassembled and reassembled without a special tool.SOLUTION: A watch case is configured to include: a middle 2 provided with a blind hole; a first movable horn 3 for fastening a strand of a bracelet, and provided with a through-hole; a first elastic element exerting force, on the horn 3, which tends to push the horn 3 back into a position with widened lug distance d; a push-button traversing the through-hole and engaged in the blind hole in the middle 2, arranged so as to be able to slide between a locked position at which the push-button blocks displacement of the horn 3 and a released position at which displacement of the horn 3 into a pushed-back position is possible; and a second elastic element exerting force on the push-button to push the push-button back into the locked position.SELECTED DRAWING: Figure 1
