Abstract (en)
[origin: WO2017198251A1] The invention relates to a watercraft for determining the location of an underwater object by means of a sonar system with an active sound transducer arrangement and a passive sound transducer arrangement, wherein underwater sound signals can be transmitted by means of the active sound transducer arrangement and received by means of the passive sound transducer arrangement, and the active sound transducer arrangement and the passive sound transducer arrangement are arranged spatially separately, wherein the active sound transducer arrangement is arranged on the body of the watercraft, and the passive sound transducer arrangement is assigned to the body of the watercraft, with the result that the watercraft can be used for determining locations in narrow and/or shallow stretches of water.
