Abstract (en)  
[origin: WO2018108331A1] The invention relates to a labeling machine (30; 80), a printing machine (30), an inspection machine (80), and a method for starting up such a machine (30; 80). The machine (10; 80) comprises at least two container receptacles, each of which has a rotary plate (331) with a rotary plate direct drive device (332), and a bus unit (330) for connecting the at least one container receptacle to a bus (7) of a bus system (5) in order to communicate with at least one component (70) of an additional container handling machine (20, 30, 40) or an additional component (35; 85) of the labeling machine (30) and/or printing machine (30) and/or inspection machine (80). The bus unit (330) has a bus input (330A) and a bus output (330B) which are configured such that the bus unit (330) is connected into the bus system (5) serially relative to an additional bus unit (330) of the bus system (5) in order to start up the bus system (5), and the bus unit (330) is configured to activate the bus output (330B) when starting up the bus system (5) after the bus unit (330) has received an identification number, which uniquely identifies the bus unit (330) during a communication in the bus system (1), via the bus input (330A).
