Abstract (en)
[origin: WO2017198263A1] The invention relates to a drinking container lid (100) for a drinking bottle, consisting of a base element (10) having at least one pour opening (19) in a base plate (11), which is surrounded by a raised edge (15) and has a flexible drinking nozzle (23) with an internal flow channel (24), which can be blocked by bending the flexible drinking nozzle (23). The drinking nozzle (23) is retained in a guide carriage (30) pivotally mounted on the base element (10). The bent drinking nozzle (23) can be mounted within a receiving space (14) surrounded by the edge (15). A detachable blocking means is provided in the drinking container lid (100), which retains the guide carriage (30) in a blocking position against the restoring force of the bent drinking nozzle (23).
