Abstract (en)

[origin: WO2017198917A1] The invention relates to an assembly for an external opening control of a motor vehicle door. The assembly comprises a mounting and a handle (4) movable in a deployment direction and in a retraction direction. An actuator (14) includes a housing (24), a first movable portion (20) driving the handle (4) in the deployment direction, a second movable portion (22) moving when the actuator (14) is supplied with energy, and a one-way coupling system (16). The one-way coupling system (16) is arranged in the housing (24) and couples the second portion (22) to the first portion (20) when the second portion (22) moves so as to drive the handle in the deployment direction via the first portion (20). In the retraction direction, the second portion (22) is uncoupled from the handle (4).
