Abstract (en)

[origin: WO2017198404A1] The invention relates to a connecting assembly, which is used to connect a plurality of damper mass elements by means of connecting elements in order to form a damper mass, wherein the connecting elements each have a central axis in an axial direction and are each formed by a shaft having two shaft ends, and the shaft ends and the shaft are enclosed by inner walls of passages of the damper mass elements, which inner walls extend around the central axis. At least some of the shaft ends have a connection with respect to the associated inner wall of the corresponding passage of the particular damper mass element by means of a hole wall.
