Abstract (en)
[origin: WO2017198641A1] The invention relates to a refrigerator device, particularly a domestic refrigerator device, comprising at least one first and one second temperature zone (21, 25), a first evaporator (1) for cooling the first temperature zone (21) and a second evaporator (2) for cooling the second temperature zone (25). The two evaporators (1, 2) each comprise a flat structure (1', 2') which consists of a coolant pipe and is laid on at least one substrate (3), said evaporators being connected in series by a curved coolant tube section (17). A compensating throttle tube section (14) which extends to an injection point (15) of the first evaporator (1) is secured to said curved coolant tube section (17).
