Abstract (en)
[origin: WO2017198243A1] The invention relates to an image display device (1) comprising elongated circuit boards (2-5) that have multiple light spots (6-19) one next to another, wherein retainer wires (20, 21) are arranged transversely thereto. The circuit boards are secured to said retainer wires and comprise a current-conducting connection (22-27) to the retainer wires in order for said circuit boards to be supplied with current.
