Abstract (en)
An air-conditioning management device (2) includes a data storage (24) that stores web content data (241) and air-conditioner data (240) relating to an air conditioner. A web server (251) transmits, in response to a request from a terminal device, the web content data (241) via a terminal communicator (23) to the terminal device. A management screen generator (252) generates a management screen for management of operating states of the air conditioner by synthesizing the air-conditioner data (240) with screen data that is based on the web content data (241), and outputs the generated management screen to a display (20).
