Abstract (en)

A radiation panel module includes a radiation panel and a heat exchange flow path through which a heat medium passes. The heat exchange flow path is provided on a back surface side of the radiation panel. In a radiation air conditioning system using the radiation panel module, a bypass flow path that does not pass through the heat exchange flow path is provided, and the flow path of the heat medium is switched in accordance with the operating environment. In this manner, the occurrence of dew condensation is prevented.
