Abstract (en)

[origin: CN109572186A] The invention relates to an apparatus (1) for drying printed material (5) provided with printing ink in a printer (2). The device has a hollow body (10) having an elongately extending air guiding region (20) with an opening (21) for transporting a gaseous medium from the hollow body (10) to the direction of a printed material (5); an input opening (11) for introducing a gaseous medium into the hollow body (10). According to the invention, the hollow body (10) and the air guiding region (20) form a common, material-consistent component.
