Abstract (en)
[origin: EP3462008A1] A gas turbine engine (20) includes a compressor section (24) having multiple stages, a combustor section (26) fluidly connected to the compressor section (24), a turbine section (28) fluidly connected to the combustor section (26), and a bleed structure (200) radially outward of the stages. The bleed structure (200) includes a body structure (214) having a first set of openings (216) radially outward of a first stage and a second set of openings (218) radially outward of a second stage. The bleed structure (200) further includes a circumferential sleeve (214) configured to cover the first set of openings (216) in a first position and configured to cover the second set of openings (218) in a second position. An actuator (230) is coupled to the circumferential sleeve (214) and is configured to articulate the circumferential sleeve (214) between the first and second positions.
