Abstract (en)  
[origin: WO2017205184A1] A garment apparatus and method is provided. The garment apparatus includes two leg panels, a rear panel, a center panel, and a fly panel, each constructed from a fabric material, wherein the rear panel, the center panel, and the fly panel are connected between the two leg panels, and wherein a lower end of the fly panel extends substantially to a center line of the center panel. At least one conduit is positioned along a seam of the fly panel, wherein the seam is formed at least between the fly panel and the two leg panels and between the fly panel and the center panel. A cord is positioned within the at least one conduit and movable between at least a tensioned state and an untensioned state.
