Abstract (en)

[origin: WO2017207566A1] The present invention concerns a device intended for connecting straps, objects or pieces of clothing and accessories. This device is a quick-clip buckle. The device according to the invention comprises two strictly identical and complementary parts, such that they can be combined so as to form a coherent assembly; for this purpose, said parts are provided firstly with a male portion that is an angled bar (2) having a flexible front arm (4) that is deployed towards the outside of the parts, acting as a spring in order to lock or open said device, and secondly with a female portion that is a shell (6) designed for the insertion of said angled bar (2); each part further has male (8) and female (9) locking members (8, 9), arranged on the inner face of the angled bar (2) in the middle of each part.
