Abstract (en)
[origin: WO2017207591A2] The invention relates to a cleaning device (4) having a support piece (5), a wiper plate (4), arranged at a lower end of the support piece (5), for holding a cleaning element (11) that is mounted on at least one side of the wiper plate (4), a liquid reservoir (2) for holding a cleaning liquid, and a conduit system for supplying the cleaning liquid in the direction of the cleaning element (11) via a pump unit. The disadvantage of known cleaning devices is that potential cleaning additives have to be added to the liquid reservoir (2), which requires some effort and has the disadvantage that the totality of the liquid is mixed with the cleaning additive. In order to solve this problem, the cleaning device (4) according to the invention is provided with a dosing system having at least one reservoir for a cleaning additive, said dosing system being designed in such a way that it can add the cleaning additive to the cleaning liquid.
