Abstract (en)
[origin: WO2017207136A1] The invention relates to a tool storage device, in particular a tool storage box, for storing application tools and/or assembly aids, having at least • - a plug-in means (13) for retaining application tools or assembly aids, and • - a storage housing (15) having a receiving region (17) for releasably fastening the plug-in means to the storage housing. The plug-in means has a first retaining end (21) connected, in particular at least partially in a form-fitting manner, to the receiving region of the storage housing, and a second retaining end (23) connected at least partially in a form-fitting manner to the receiving region of the storage housing, in order to secure the plug-in means in a form-fitting manner with respect to at least a first direction X. It is proposed that the plug-in means, in particular the first retaining end and the second retaining end of the plug-in means, be connected to the storage housing such that the plug-in means is mounted, in particular clamped in place, firmly, in particular in a play-free manner, in at least a second direction Y on the storage housing.
