Abstract (en)

[origin: WO2017209611A1] The invention relates to a bread-packaging device for packaging a single sliced loaf of bread. The bread-packaging device comprises a conveying unit (1) which can be connected or attached to a bread-slicing device (200). The conveying unit (1) is configured to receive a single sliced loaf from the bread-slicing device (200). The bread-packaging device also comprises a packaging unit (3) which is connected to the conveying unit (1) in such a way that a passage (4) for the single sliced loaf is formed between the conveying unit (1) and the packaging unit (3). Furthermore, the conveying unit is configured for conveying the received single sliced loaf to the packaging unit (3) via the passage (4). The packaging unit (3) is configured for packaging the single sliced loaf received from the conveying unit in a bag. The packaging unit comprises bag-opening means (21) which can be brought to a first position for receiving a bag, and which can be brought to a second position by a user in order to open the bag, with an opening of the bag being situated in front of the passage.
