Abstract (en)

[origin: WO2017207213A1] Disclosed are a pouring element (A) for a composite packaging (P), in particular a beverage carton for liquid foodstuffs, said element comprising: a main body (2) with a fastening flange (5) and a spout (6), a cutting element (3) provided and guided in the spout (6), first guide means (7) formed in the spout (6) and second guide means (8) formed on the cutting element (3), the first and the second guide means (7, 8) correspondingly co-operating with one another; and a composite packaging (P), in particular a beverage carton for liquid foodstuffs, comprising a gable-type packaging end panel (1) suitable for receiving a pouring element (A). In order to optimize the production of the pouring element (A) from a material and production standpoint and to guarantee the initial opening of the composite packaging (P) in the region of a weakened section of the packaging material, according to the invention, the first guide means (7) is formed by a peripheral uninterrupted rib (9).
