Abstract (en)

[origin: WO2017202657A1] The present invention relates to a group of installations for manufacturing mineral construction materials, comprising a furnace (1) for producing mineral construction materials, a cooler (2) for cooling the mineral construction materials, and a gas conduction system (3) for gases which are generated during the manufacture of the mineral construction materials, the group of installations having a chemistry installation (4) and/or a biotechnology installation (5) connected to the gas conduction system (3), and the gas conduction system (3) having at least one controllable gas combiner/separator (6) for apportioning the gas volumetric flows supplied to the chemistry installation (4) and/or the biotechnology installation (5).
