Abstract (en)  
[origin: WO2017207708A1] Inventory management system (100), having a plurality of filling devices (101 to 103) to be filled with goods elements (105 to 107), and a plurality of goods management apparatuses (120), each of which is associated with exclusively one combination of at least one type of goods elements (105 to 107) and at least one affiliated instance of the filling devices (101 to 103), and each of which has a user interface (122) by means of which a user is rendered able to manage the at least one type of associated goods elements (105 to 107) in regard to the at least one affiliated instance of the filling devices (101 to 103), and a communication device (124) for communicating with a central control device (130), wherein the inventory management system (100) further has the central control device (130), which is configured to trigger, on reception of an appropriate communication message from one of the communication devices (124), an order for the at least one type of associated goods elements (105 to 107) specifically for the at least one affiliated instance of the filling devices (101 to 103).
