Abstract (en)
[origin: WO2017202457A1] The invention relates to a method for producing a customised component (100), comprising the following steps: providing (1) a combination program (10) connected to a manufacturer database (11), in which the characteristics (12a) and/or technical features (12b) of potential components (100) are stored, wherein only those characteristics (12a) and/or technical features (12b) which are plausible in a combination according to a specification can be combined with one another to form a potential component (100), and wherein at least one potential component (100) is proposed in accordance with a client-side determining (2) of at least one characteristic (12a) and/or a technical feature (12b); selecting (2) a proposed potential component (100) by a client (90); automatically creating (3) at least one production plan (20) in accordance with the potential component (100) selected by the client (90); and producing (5) the component (100) according to the production plan (20) at a manufacturer (80).
