Abstract (en)
[origin: WO2017202803A1] The invention relates to an electromagnetic switch (100), comprising: an armature (113); a slide (101), which can be manually slid in order to actuate the armature (113); and a deformable force-transmitting element (105), which is arranged between the slide (101) and the armature (113), wherein the slide (101) can be pressed against the deformable force-transmitting element (105) with a pressing force in order to actuate the armature (113), wherein, when a pressing-force threshold value is exceeded, the deformable force-transmitting element (105) can be deformed by the pressing force in order to limit the pressing force that can be transmitted from the slide (101) to the armature (113).
