Abstract (en)

[origin: WO2017202300A1] A method for control-plane and user-plane transmissions in a customized C-RAN is disclosed. The method includes providing control-plane (CP) signaling using a first beam in a radio resource, and providing user-plane (UP) content using a second beam in the radio resource based on the CP signaling, wherein the first beam provides wider access coverage than the second beam. The radio resource is a licensed band or an unlicensed band. The first beam and the second beam are millimeter-wave beams. The first beam has an omni-directional beam pattern. The second beam has a directional beam pattern.
